

APPENDIX B: COST TABLES

APPENDIX B BASIS OF COST ESTIMATE

This appendix provides a detailed breakdown of the estimated implementation costs for each of the remedial alternatives subject to detailed screening in Section 6 of the Feasibility Study Report. Costs include both capital costs for implementation as well as long-term operation and maintenance (O&M) costs, including engineering, administration, and contingencies. Following is a brief overview of the general cost estimating approach and assumptions common to many of the alternatives.

Intended Accuracy of Estimates

Per the USEPA Remedial Investigation/Feasibility Study (RI/FS) guidance, the accuracy of FS cost estimates is intended to be in the range of -30 to +50 percent.

Basis of Costs/Unit Rates

Costs are based on published unit rates, such as R.S. Means, technology review documents, recent actual cost data and supplier quotes for other projects of a similar nature, and professional judgement. Where appropriate and unless otherwise indicated, estimated rates and costs include contractor labor, equipment, materials, expenses, and third-party services (such as waste transportation and disposal), commensurate with the intended accuracy of the estimate. Material costs include procurement, delivery, placement, and compaction, as appropriate. Waste disposal costs include approvals, loading, hauling, and disposal fees.

Construction Cost Index

The most recent Engineering News Record Construction Cost Index is 11392 (as of January 2020). As appropriate, the cost index may be used to update older cost information (for example, the cost index has increased approximately 14 percent since January 2015).

Capital Costs

Capital costs for each alternative are broken down by direct implementation costs and indirect costs.

Direct Implementation Costs: Direct costs for implementing each alternative are remediation contractor costs broken down by significant components of each remedy. Quantities are based on the volumes and areas described in Section 5 where appropriate. As noted above, unit rates are estimated and include contractor labor, equipment, materials, expenses, and third-party services. Common quantity assumptions include the following:

Conversion from in-place cubic yards to tons for disposal = 1.65 tons/cubic yard Percentage of excavated soil/fill assumed to require handling as hazardous = 25%

Indirect Costs: Indirect costs are broken into several categories, and represent ancillary costs necessary for, but not directly associated with, implementation of each remedy. While these costs are generally estimated as a fixed percentage of the estimated direct costs, adjustments may be made to more accurately reflect anticipated costs. For example, no construction management costs would be incurred if a remedy consists of the filing of deed notices and other institutional controls.

Remedial Design: Preparation of design documents needed for contractor procurement and implementation of the remedy. Estimated based on the relative complexity of the remedy, and may include multiple levels of design and agency review/comment.

TABLE B-1A PRELIMINARY COST ESTIMATE WASTE - ALTERNATIVE 1 NO ACTION

Component	Estimated Quantity	Unit	Estimated Unit Cost	Estimated Capital Cost	Estimated Annual O&M Cost
Capital Costs					
Direct Implementation Costs					
		Subtot	al - Direct Costs	\$0

Construction Management/Oversight	(10% of Direct Costs)			\$0	
	Subtotal - Indirect Costs			\$0	
Contingency - 25% of Direct and Indirect Costs				\$0	
Total Capital Costs				\$0	
Operation and Maintenance Costs					
Site Inspections/Maintenance					\$0
Five-Year Reviews (annualized cost)					\$1,000
	Subtotal - O&M Costs				\$1,000
Со	Contingency Reserve - 25% of O&M Costs				\$250
Total Annual O&M Costs					\$1,250
Net Present Worth of Annual O&M Costs				\$15,511	
Total Net Present Worth of Alternative				\$16,000	

Mobilization/Miscellaneous Site Preparation: Includes mobilization and demobilization of contractor resources to/from the Site, along with miscellaneous costs such as work trailer setup, establishment of electric service, restroom facilities, etc. Generally estimated as 5 percent of direct costs.

Site Administration: Costs borne by the responsible party for internal administration of the Site and management of design and remediation contractors. Generally estimated as 1 percent of direct costs.

Permitting/Legal Costs: Costs associated with applying for and obtaining any local permits necessary for the work, as well as any legal/filing fees commonly associated with institutional controls. Generally estimated as 2 percent of direct costs.

Construction Management/Oversight: Costs associated with the management and oversight of the remedial action contractor during implementation of the remedy, including labor, expenses, and third-party services, such as laboratory analysis or surveying, not otherwise included in the direct costs. Generally estimated as 10 percent of direct costs.

Operation and Maintenance Costs

O&M costs are those costs required to continue implementation of the remedy after the capital construction period has been completed. Typical components include site inspections, routine monitoring, and continued O&M of remediation systems. Additionally, costs are included for National Contingency Plan (NCP)-required five-year reviews. Costs for five-year reviews include document review, site inspections, and coordination with agency personnel. For the purposes of this FS, these costs have been distributed among the various media in accordance with the relative complexity of those media.

Costs for each O&M item are typically presented on an annualized cost basis. Per USEPA guidance, a 7 percent discount factor is used to determine the new present value of the O&M costs over a period of 30 years.

Groundwater Monitoring: Costs for groundwater monitoring assume annual sampling of up to 25 monitoring wells for volatile organic compounds, semivolatile organic compounds, and metals, and include labor, equipment, analysis, reporting, and purge water disposal. Classification exception area monitoring assumes a similar sampling scope but on a biennial basis.

Contingency

A contingency of 25 percent is added to both capital and O&M costs to account for unforeseen costs which may be incurred during implementation and O&M of the remedy, such as increases in media quantities required to be addressed beyond that assumed for the FS.

Assumed Soil/Fill/Waste Quantities: Assumed quantities for the various waste, soil/fill, and soil gas alternatives are summarized as follows:

Alternative	Surface Area	Volume
Waste		
1 – No Action	N/A	N/A
2 – Removal and Off-Site Disposal	N/A	39kgal + 6 USTs + 3,173 CY soil
